## Preface

The main objective of any computer science student is to get practical knowledge as possible. Being able to have a practical knowledge by developing a project is a lifetime experience. As practical knowledge is important as theoretical knowledge we are thankful of having a project.

Through the development of the project we had a great experience of various strategies that can be applied in development of the project. This project is the stepping stone for our career.

We are pleased to present this project report. Proper care has been taken while organizing the report so that it is easy to comprehend. Also, various software engineering concepts have been implemented.

## Acknowledgment

We are students of **BCA Sem-5** studying at **Kamani Science College, Amreli**. We sincerely thank all the people who have supported us in the development and completion of this project.

We express our heartfelt gratitude to **Ms. Dhruvita Savaliya** and **Mr. Vipul Baldha** for their guidance, cooperation, and invaluable support in understanding and implementing the system. Their advice and encouragement were crucial in the successful completion of this project.

We are also thankful to our Head of Department for encouraging us to undertake this activity, as well as all the faculties and administrative staff of the institute for their support throughout our studies.

We extend our special thanks to **our friends, my family, and my brother Prijesh Shekhada** for their continuous motivation and support during this endeavor.

**Thanks to all!!**

## Abstract

The online Freelance Marketplace is a web portal where freelancers and clients interact with each other. On this platform, a client places an order according to their needs, and a freelancer usually receives and completes the order. In this way, the client gets their work done efficiently, and freelancers earn money by offering their skills and services.

This project aims to develop a freelance marketplace where freelancers can post their skills and offer their services, allowing clients to browse and directly approach suitable freelancers based on their requirements.

Both freelancers and clients benefit from this platform. Clients seeking international talent can leverage favorable exchange rates, enabling them to get high-quality work at significantly reduced costs compared to local hiring. Freelancers, on the other hand, gain access to a global network of potential clients and the flexibility to work independently from anywhere, without being tied to a traditional office environment.

COLLEGE TO CARRIER

## Introduction

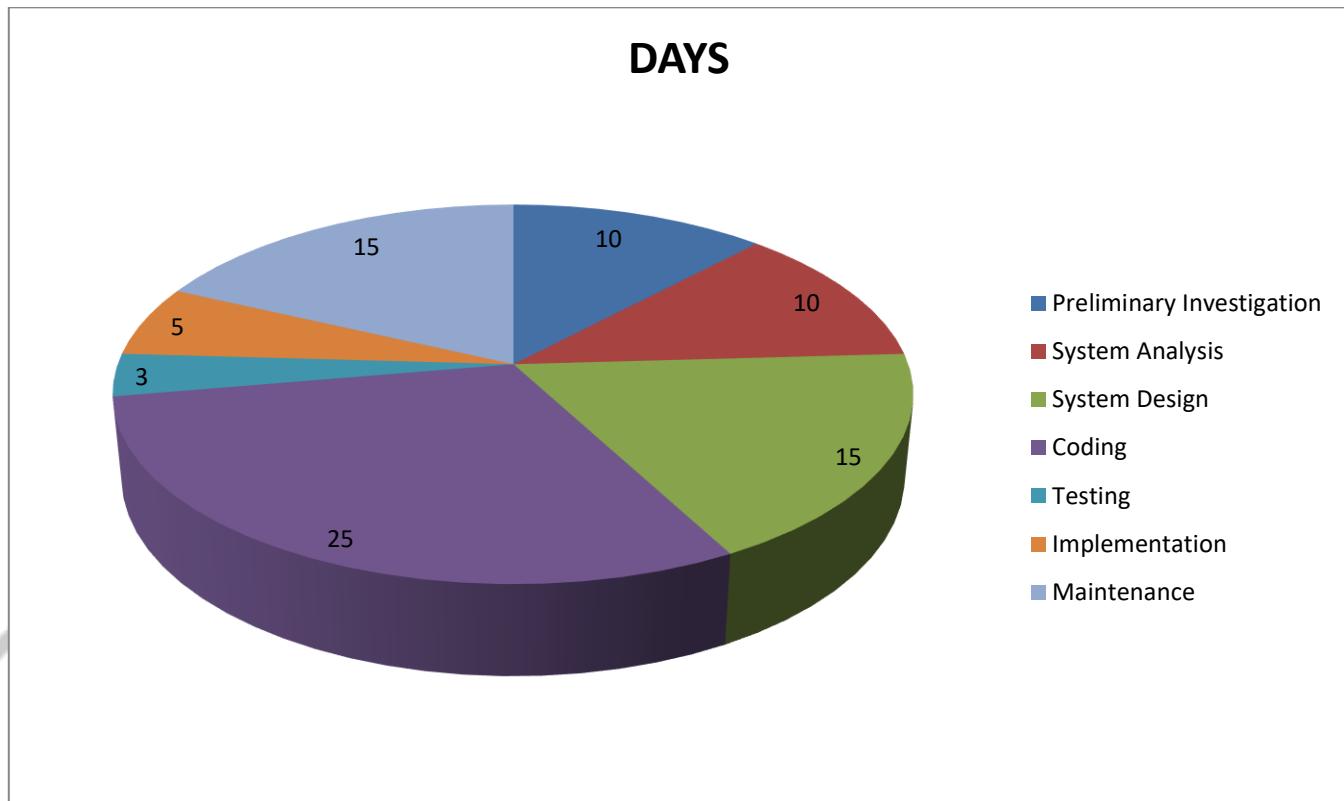

In today's digital era, freelancing has become a popular way for skilled individuals to offer their services and for clients to access a wide range of talents online. Keeping this in mind, we developed **Workloop**, an online freelance portal that connects clients and freelancers efficiently.

**Workloop** is designed to provide a platform where **freelancers can post their service gigs**, and **clients can browse these gigs and place requests** for the services they need. The system ensures a smooth workflow through **role-based dashboards**, **secure user authentication**, **order management**, **messaging**, and **admin monitoring**, providing an organized and transparent environment for both clients and freelancers.

The primary goal of this project is to give students practical experience in **web development**, **database management**, and **software engineering concepts**. By working on this project, we gained knowledge in **PHP**, **MySQL**, **HTML**, **CSS (Tailwind)**, **JavaScript**, and implementing real-world functionalities such as **profile management**, **service posting**, **client requests**, **chat systems**, and **dashboards**.

Overall, the **Workloop project** is not only a demonstration of technical skills but also an application that simulates real-world freelance marketplaces, helping us understand the complete lifecycle of an online service platform.

## Time Line Chart

Preliminary Investigation	10 Days
System Analysis	10 Days
System Design	15 Days
Coding	25 Days
Testing	3 Days
Implementation	5 Days
Maintenance	15 Days

# Project Profile

- **Project Name** : Student Freelancing System
- **Developed by** : Shekhada Aryan & Mer Chetan
- **Front End tool** : PHP
- **Back End tool** : MySQL
- **Operating System** : Microsoft Windows 10
- **Computer System** : Pentium-IV or Higher, RAM: 256 MB
- **Project Details** : Workloop is platform that provide student and fresher to get their first work experience with minimum requirement
- **Completion Time** : 2.5 Months
- **Guided by** : Ms. Dhruvita Savaliya
- **Submitted by** : Saurashtra University, Rajkot

## Hardware Requirement

❖ Processor :	❖ Intel i3 or Higher
❖ RAM :	❖ Minimum 4GB
❖ Storage :	❖ Minimum 16GB
❖ Display :	❖ Any Modern Display

## Software Requirement

- ❖ **Operating System** : Microsoft windows 10
- ❖ **Web Server** : XAMPP(Apache + MySQL)
- ❖ **Front End Tools** : VS Code, Sublime Text 3
- ❖ **Back End Tools** : PHP MySQL
- ❖ **Browser Specification** : Google Chrome , Mozilla Firefox
- ❖ **Documentation Tool** : Microsoft word 2007

# Requirement Specification

## 1. What is Workloop?

- A freelance platform for students to offer and request services like design, coding, tutoring, etc.

## 2. Why did you choose this project?

- To help students earn using their skills, like Fiverr, but made for college use.

## 3. What problem does it solve?

- Students often need help or want to earn — this connects them with each other easily.

## 5. Is there market demand?

- Yes. Students always need help with small tasks, and many want freelance work experience.

## 6. How is it different from Fiverr?

- Simpler, free to use, made only for students with admin control and no real money.

## 7. Main features?

- Signup/login, post services, request service, accept/reject, chat, admin panel and project manage.

## 8. How does chat work?

- When a request is accepted, buyer and seller can chat in a private window using PHP + AJAX.

## 9. Which technologies are used?

- **Frontend:** HTML, CSS (Tailwind CSS), JavaScript
- **Backend:** PHP
- **Database:** MySQL
- **Server:** XAMPP (Apache + MySQL)

## **10. Which tables are used?**

- Users, services, requests, messages, and categories.

## **11. Is the system secure?**

- Yes, it uses sessions and hashed passwords.

## **12. Can it be hosted online?**

- Yes, using free hosting like Infinity Free

## **13. Any limitations?**

- No payment system yet or no mobile app now.

## **14. Can it be upgraded?**

- Yes, future features like payment, reviews, and mobile app can be added.

## **15. Why is this project useful?**

- It gives students freelance experience and helps them earn from real skills.

## Problem Definition

In today's digital world, many clients struggle to find skilled freelancers for specific tasks, while freelancers often face difficulty showcasing their services and getting genuine work opportunities. Traditional methods of hiring, such as personal referrals or advertisements, are time-consuming, inefficient, and lack transparency.

- **Lack of opportunities for students and fresher's** to showcase their skills.
- **Difficulty for clients** to find affordable, entry-level freelancers.
- **Communication and project tracking issues** between clients and new freelancers.

**Workloop** addresses these problems by providing a **web-based portal** where **freelancers (students and fresher's) can post their service gigs**, and **clients can browse and send requests**. The system ensures smooth workflow through **secure dashboards, messaging, and admin monitoring**, making it simple and transparent for beginners to get work experience.

## Project Planning & Scheduling

**Project Planning** is a key aspect of **Project Management**, involving a set of processes aimed at ensuring that all project tasks are well-coordinated and aligned with project objectives, including timely completion. In simple terms, project planning focuses on organizing the tasks, resources, and timelines to achieve the desired goals efficiently.

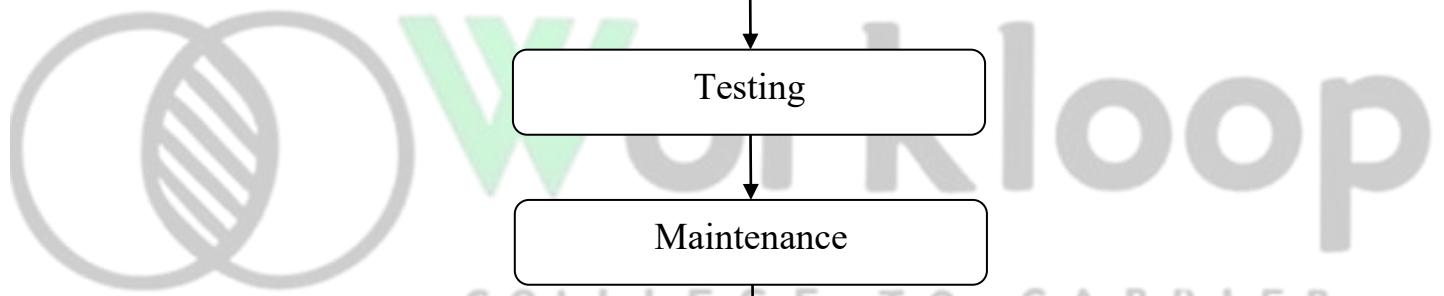

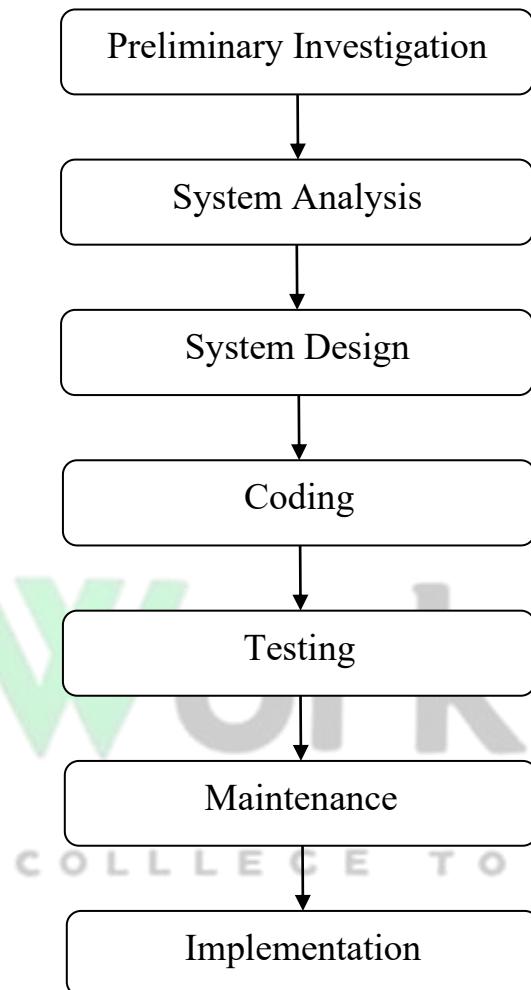

The **project plan** reflects the current status of all activities and serves as a guide to monitor and control the project. Proper planning ensures that every element of the project is coordinated, making execution smoother and reducing the risk of delays or conflicts.

**Project Scheduling** is an important part of planning and involves defining **when tasks should be completed** and **how resources are allocated**. In large projects, multiple teams may work in parallel on different tasks, but their work can be interdependent. Scheduling helps manage these dependencies and ensures that each task is completed in the correct sequence.

For **Workloop**, project planning and scheduling helped us:

- i. Divide tasks like **frontend, backend, database, and testing** among team members.
- ii. Set timelines for **module completion** (authentication, dashboard, messaging and admin panel).
- iii. Track progress and ensure the project was completed **on time**.

- Project Planning & Scheduling as under :

## System Analysis

System analysis is the process of identification of objectives and requirements, evaluation of alternative solutions and recommendation for a more feasible solution. In other words, system analysis is the step by step process of gathering, recording and interpreting facts. The main aim of analysis is to determine problem areas and to take solutions to reduce or eliminate them.

- System analysis itself breaks into two stages:

### **1. Preliminary analysis :**

### **2. Detailed analysis :**

During analysis, data are collected from the available files, decision points and transactions of the systems using various tools like Data Flow Diagram (DFD).

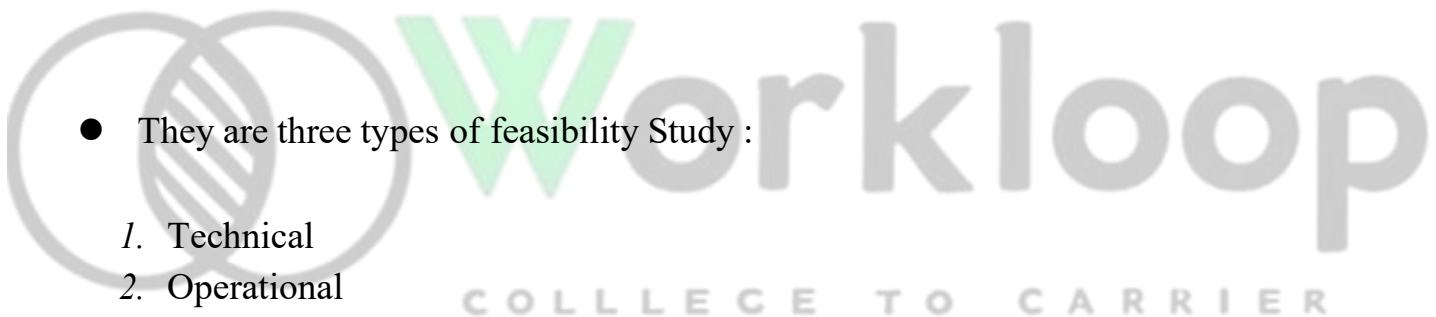

## Feasibility Study

A purpose of feasibility study is to check out the possibility of a computerized solution to the organization's observed problem before very much money that has been spent on.

A feasibility study is carried out to select the best system that meets performance requirements. Only by spending the time to evaluate the feasibility do I reduce the chances for extreme embarrassment at later stage of the system project.

For the complete feasibility study I need to concentrate on following Area:

- They are three types of feasibility Study :
  1. Technical
  2. Operational
  3. Economical

➤ ***Technical:***

Technical feasibility considers whether the desired project can be completed within the framework of available technology. As our project was website designing, this was not much of a problem, as many advanced web-editing tools are available.

➤ ***Operational:***

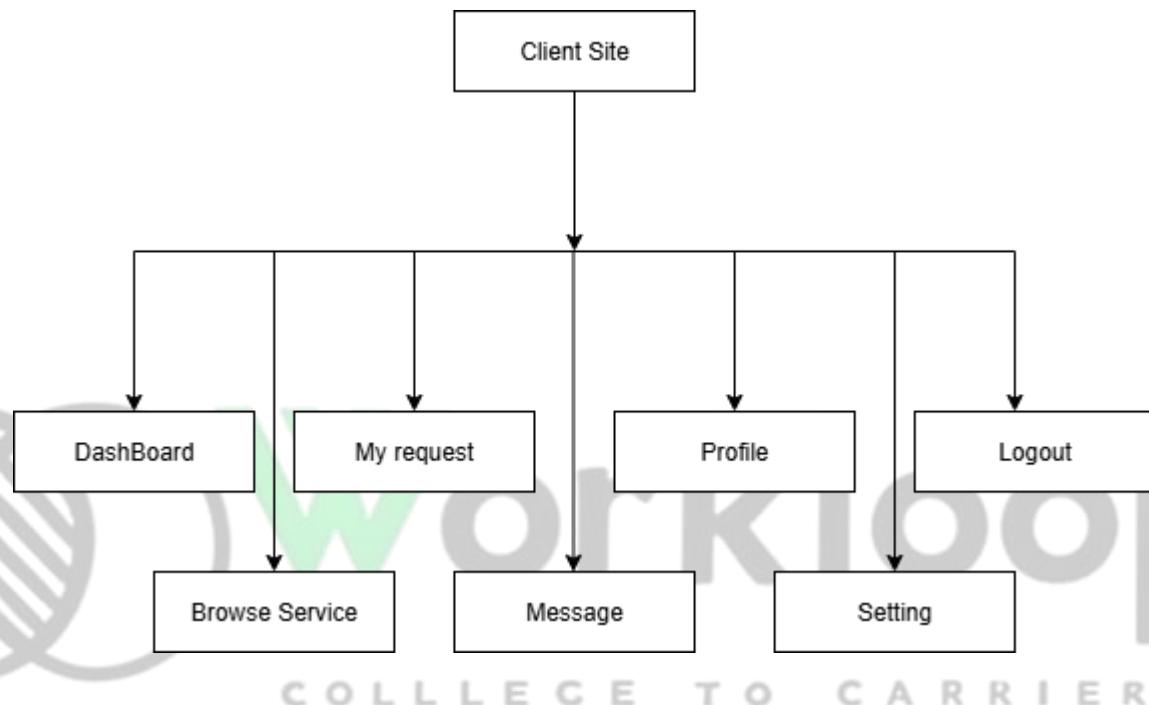

Operational feasibility was done to assure that the product that would be developed would be used. Since cards and gifts have to have a website of its own sooner or later, that wasn't much of a problem.

➤ ***Economical:***

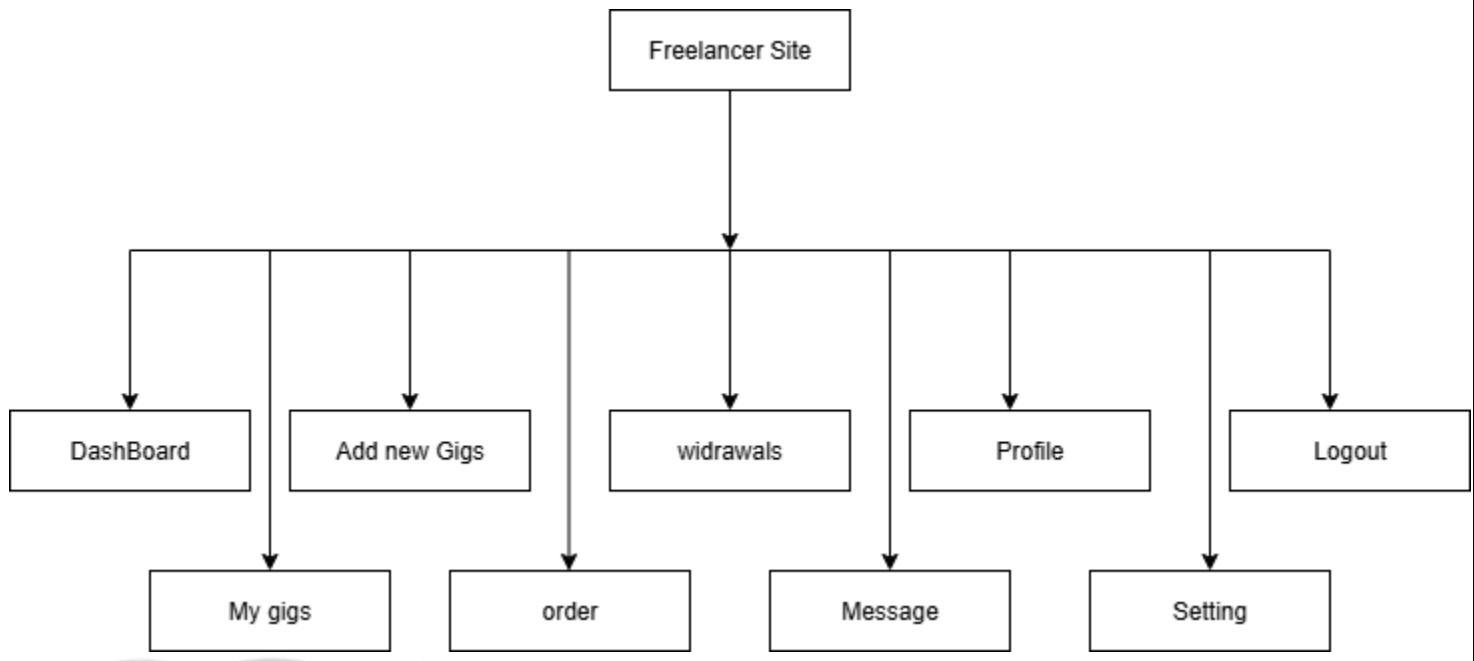

Our Commercial Website is Economically Feasible Because. We have developed this website only for one time. Only future enhancement is required on the other hand every client can view our site any time or many time as per their requirement. So the future economical expenses are null. So we can say that this website is totally economically feasible.

# Project Page Structure

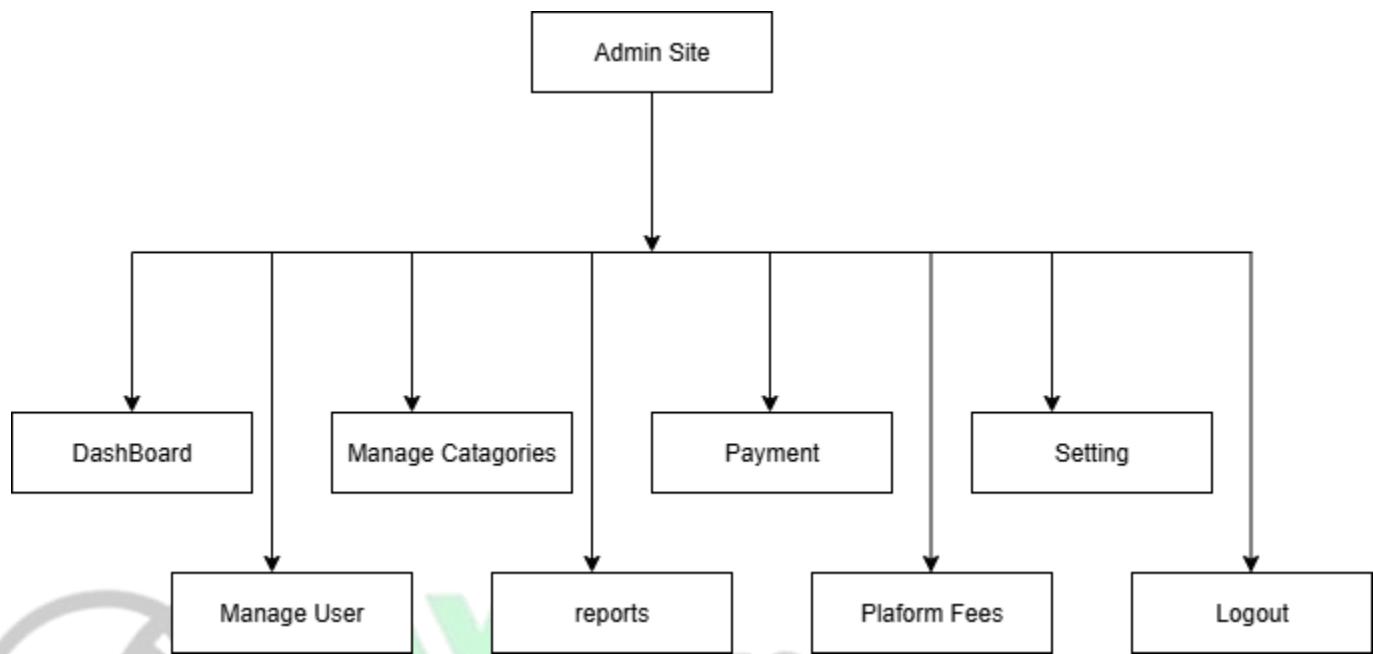

- Client Side :

➤ Freelancer Side :

➤ Admin Side :

# Data Dictionary

The data Dictionary is a set of table. MySQL uses it to maintain information about this own database.

➤ **Data dictionary contains the following information :**

- ✓ Name of the table of database.
- ✓ User information such as privileges.
- ✓ Name and data-type of all columns in database table.

❖ **Database Name : workloop**

## Home Page:-

The screenshot displays the homepage of Workloop, a platform connecting clients and freelancers. At the top, a banner features a photo of a person working at a desk with a computer monitor. The banner text reads "Our freelancers will take it from here". Below the banner is a search bar and several service category buttons: "website development", "architecture & interior", "UGC videos", "video editing", and "vibe coding". A "JOBS" button is located in the top right corner.

Below the banner, the page is divided into sections:

- Popular Categories:** Includes icons for Programming & Tech, Graphics & Design, Digital Marketing, Writing & Translation, Video & Animation, and AI Services.
- Popular Services:** Shows icons for Vibe Coding, Website Development, Video Editing, Software Development, SEO, and Architecture & Interior Design.
- Start Your Side Hustle:** A callout box with an icon of a rocket ship, encouraging users to learn how to turn skills into freelance income.
- Ecommerce Business Ideas:** A callout box with an icon of a shopping cart, encouraging users to boost their brand by hiring experts online.
- Grow Social Presence:** A callout box with an icon of a social media post, encouraging users to get help creating posts, ads, or campaigns.
- Top Freelancers:** A section featuring three profiles: Riya Sharma (Web Developer), Aditya Mehta (Video Editor), and Pooja Desai (Logo Designer). Each profile includes a small thumbnail, name, job title, and a 5-star rating.
- Premium Freelance Services for Businesses:** A light green section highlighting top-verified experts and reliable service with full project tracking.
- What Our Users Say:** Two testimonial boxes. The first from "Rahul, Student Freelancer" says: "Workloop helped me find my first freelance job during college. It's user-friendly and professional." The second from "Ayesha, Startup Owner" says: "As a client, I loved the support and the quality of services I received. Great experience!"
- Freelance Services at Your Fingertips:** A large green button with the text "Join Workloop Today".
- WORKLOOP:** A brief description of the platform: "Workloop is your trusted platform connecting clients and freelancers worldwide, offering seamless workflow and secure payments."
- QUICK LINKS:** A sidebar with links: Dashboard, My Orders, Messages, Help & Contact, Profile, and Logout.
- CONTACT US:** Information including email (support@workloop.com) and phone number (+91 7201932204), along with social media icons for Facebook, Twitter, LinkedIn, and Instagram.

## Freelancer Side:-

The screenshot shows the Freelancer dashboard. On the left, there is a sidebar with the following menu items:

- Dashboard
- My Gigs
- Add New Gig
- Orders
- Withdraw
- Messages
- Profile
- Settings
- Logout

The main content area has a heading "Welcome, Freelancer" with a hand icon. Below it are five summary cards:

- Total Gigs: 2
- Total Orders: 5
- Completed Orders: 2
- Total Earnings: ₹ 11,998.00
- Wallet Balance: ₹ 3,499.20 (Platform Fees Paid: ₹2,400.00)

Below these cards is a table titled "Recent Orders" with the following data:

Order ID	Client Name	Amount	Status	Created	Deadline
11	Rohan	₹5,999.00	Delivered	27 Aug 2025	25 Sep 2025
10	Rohan	₹5,999.00	Completed	27 Aug 2025	02 Sep 2025
9	Rohan	₹5,999.00	Pending	27 Aug 2025	01 Jan 1970
8	Rohan	₹5,999.00	Pending	27 Aug 2025	01 Jan 1970
7	John	₹5,999.00	Completed	27 Aug 2025	02 Sep 2025

At the bottom of the page, there is a footer with sections for "WORKLOOP", "QUICK LINKS", and "CONTACT US".

# Client side

The screenshot displays the client-side interface of the Workloop platform. On the left, a vertical sidebar titled "Workloop" contains links for Dashboard, Browse Services, My Requests, Messages, Profile, Settings, and Logout. The main content area features a "Welcome, 🙋" message and three cards: "My Orders" (Track and manage your active & past orders), "Explore Services" (Find talented freelancers for your projects), and "Messages" (Stay connected with freelancers). Below these is a "Manage Orders" section with a table showing six completed website builds. The footer includes sections for "WORKLOOP" (describing the platform), "QUICK LINKS" (Dashboard, My Orders, Messages, Help & Contact, Profile, Logout), and "CONTACT US" (support email, phone number, and social media icons for Facebook, Twitter, LinkedIn, and Instagram). A copyright notice at the bottom states "© 2025 Workloop. All rights reserved."

# Testing

## ➤ What is testing?

Testing is the process of evaluating and verifying that a software product or application Does what it is supposed to do.

## Types of testing:-

- Manual testing
- Automation testing

## Manual testing:-

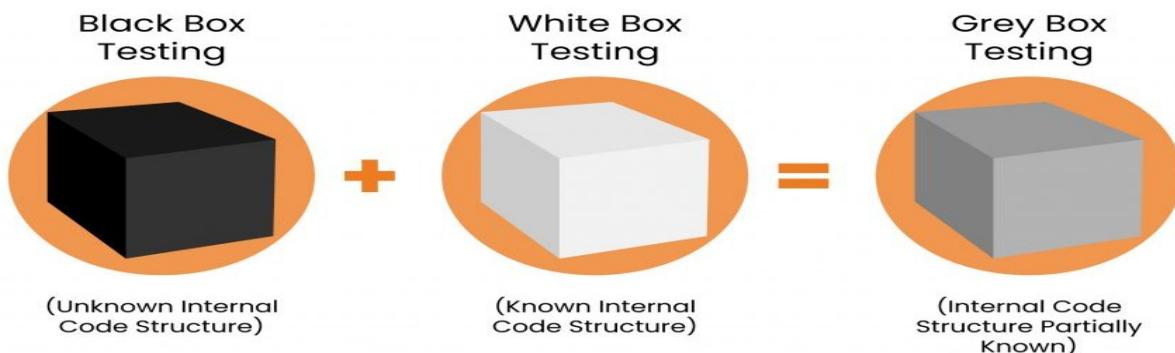

- White Box Testing:-
  - It is Software testing technique that involves testing the internal structure and workings of a software application.

## ➤ Black Box Testing:-

- A form of testing that is performed with no knowledge of a system's internals.

## ➤ Gray Box Testing:-

- In Gray box testing, the tester is not required to design test case

## Test Case

**Test Objective:**  
Login page:-

ID	Test Step	Input data	Expected result	Actual result	Exception result
01	Check Both valid email-id and password.	Enter valid email-id and password	User should be go Dashboard page.	User login successfully.	Successful
02	Check Both invalid email-id and password	Enter invalid email-id and password	User should not go on Dashboard page.	User not found	Unsuccessful
03	Check Both invalid email-id and valid password	Enter invalid email-id and valid password	Use not found This warning should be show	User not found	Unsuccessful
04	Check Both valid email-id and invalid password	Enter valid email-id and invalid password	Invalid password warning should be show	Invalid password.	Unsuccessful

## Future Scope

The **Workloop** project provides a basic freelance portal for students, fresher's , and clients. In the future, this system can be enhanced and expanded in several ways to make it more powerful and user-friendly:

- **Payment Integration** – Adding online payment gateways (like PayPal, Razorpay, or Stripe) for secure transactions between clients and freelancers.
- **Advanced Search and Recommendations** – Implementing AI-based suggestions for clients to find freelancers based on skills, ratings, and experience.
- **Mobile Application** – Developing Android and iOS apps to make the platform accessible on smart phones.
- **Notification System** – Adding real-time notifications for messages, requests, and updates.
- **Portfolio Showcase** – Allowing freelancers to display their portfolio, certifications to attract clients.
- **Multi-language Support** – Making the platform accessible in multiple languages for a wider audience.

With these enhancements, **Workloop** can grow into a full-featured freelance marketplace, providing better opportunities for beginners and a seamless experience for clients.
